Effectiveness and Efficiency of Nursing Education Programs
Spectrum of Lifelong Education

The integration of technology in classrooms is rapidly emerging as a way to provide more educational opportunities for students. As virtual learning environments become more popular, evaluating the impact of this technology on student success is vital. Exploring the Effectiveness of Online Education in K-12 Environments combines empirical evidence and best practices in current K-12 distance learning and virtual schools. Emphasizing current research and opportunities, this book is an all-inclusive reference source for administrators, teachers, researchers, teacher-educators, and policymakers interested in the development and implementation of blended and electronic learning in primary and secondary education.

Continuing Education: Agent of Change

This report of the Panel of Continuing Education was prepared as part of the study on engineering education and practice in the United States that was conducted under the guidance of the National Research Council's Committee on the Education and Utilization of the Engineer. The report deals with: (1) "Participation in Continuing Education--The Engineer's Perspective"; (2) "The Role of Industry"; (3) "The Role of the University"; (4) "The Role of Professional Societies"; (5) "The Role of Proprietary Schools"; and (6) "The Role of Government." A reference list and bibliography are included, along with appendices which address a pilot study for a study of policymakers' attitudes toward continuing education, a list of 1984 continuing education programs of technical societies, and a professional society survey. Report of Secretary's Commission on Medical Malpractice

After conducting a comprehensive literature search, the authors undertook a meta-analysis to examine the association between correctional education and reductions in recidivism, improvements in employment after release from prison, and other outcomes. The study finds that receiving correctional education while incarcerated reduces inmates' risk of recidivating and may improve their odds of obtaining employment after release from prison.

Annual Report - National Advisory Council on Extension and Continuing Education

The success of adult continuing education programmes depends to a large extent on the continuing education working at the grassroot level. The diversified roles to be played by the continuing education worker demands a variety of competencies on his/her part. To provide functional literacy and solve the problems of adult in day to day life, the adult continuing education worker has to perform several organisational roles, teaching roles and community roles. Contents: Introduction, Review of Related Literature, Statement of the Problem, Methodology, Results and Discussion, Summary and Conclusions.

Evaluation for Continuing Education provides the useful and practical tools necessary to ensure a successful program evaluation. The book presents systematic guidelines aimed at enhancing understanding of evaluation concepts and procedures, and offers manageable ways to selectively include evaluation activities as an integral part of program planning, implementation, and justification. Author Alan Knox reveals that the key to successful evaluations that improve education programs for adults is a basic rationale for why and how. He helps readers select and develop their own rationale throughout the course of the book while suggesting fundamental evaluation concepts and procedures. He shows how to distinguish some program aspect upon which a specific evaluation project will focus-including needs assessment, goals and policies, staffing assessment, materials development, and more-and summarizes examples of evaluation reports that reflect the various types of providers and scales on which evaluations are conducted. Knox offers a particularly wide variety of these examples, enabling readers to reflect on implications for their own evaluations and fashion unique guidelines and procedures that fit their own situations.

Evaluation for Continuing Education

The experience of HEC in integrating computer applications into its continuing education program for hydrologic engineers has indicated that it is possible to provide experienced engineers with a good working knowledge of computer-oriented problem-solving techniques in a continuing education environment. However, it appears that the effectiveness of integrating computer applications into continuing programs—as measured by the ability of the engineers to use the techniques in their normal working environment—is dependent upon three factors: the availability of broadly applicable, well-documented computer programs in the technical subject; the development of workshop problems for use in the training program to illustrate the capability of the programs for solving both routine and unusual problems; and the availability of rapid turn-around computer capability that enables the trainees to obtain ‘hands-on’ experience in using the programs.
